

HealthTech PHI/PII Redaction Audit Report

Prepared for: **patient1** | Role: **patient**
Generated on: **2026-08-18 03:46:54**

Executive Summary

Metric	Value
Total identifiers removed	7
Unique identifier classes	5
Risk classification	High risk
Processing status	Completed before external AI submission

Multiple direct identifiers were detected across the note; all were masked before external processing to reduce re-identification risk.

Detected PHI/PII Breakdown

Entity Type	Count
DATE_TIME	2
EMAIL_ADDRESS	1
HOSPITAL_NAME	1
PERSON	2
PHONE_NUMBER	1

Original Clinical Text

Patient John Smith (john.smith@example.com, +1 (555) 123-4567) was admitted to St. Mary's Hospital on 2026-08-05. His DOB is 1985-03-14 and he was seen by Dr. Emily Carter.

Redacted Output

Patient (,) was admitted to on . His DOB is and he was seen by Dr. .

HIPAA Safe Harbor Coverage

- Names
- All geographic subdivisions smaller than a state
- Dates except year
- Telephone numbers
- Fax numbers
- Email addresses
- Social Security numbers
- Medical record numbers

Compliance Notes

The de-identification workflow identified direct identifiers, replaced them with neutral placeholders, and preserved clinical meaning necessary for downstream review. This reduces exposure risk while maintaining sufficient context for medical documentation and AI-assisted summarization.
